amazing

$P(\text{amazing} \mid A) \approx 0.01$ (10/1000, Laplace-smoothed) — $P(\text{amazing} \mid H) \approx 0.00$ (1/1000, Laplace-smoothed)

WORKED EXAMPLE

Worked example: with "imagine" as the target word, we'd scan every response for "imagine" and tally how often it shows up in AI answers versus human answers.

A = text is AI-written

H = text is human-written

W = text contains "imagine"

$$P(W \mid A) \approx \frac{\text{count}(W \mid A) + 1}{n + 2} = \frac{385 + 1}{1000 + 2} = 0.39$$

$$P(W \mid H) \approx \frac{\text{count}(W \mid H) + 1}{n + 2} = \frac{20 + 1}{1000 + 2} = 0.02$$
